

# A Case Report on Using Biofeedback for Psychological Assessment

Tomoko Muramatsu<sup>1</sup>

<sup>1</sup>Kyoto Notre Dame Joshi Daigaku

April 14, 2021

## Abstract

A psychological assessment using biofeedback was performed for an adjustment disorder inpatient who showed less verbal and non-verbal expressions, and experienced difficulty in receiving favorable results from treatment. The assessment revealed hidden problems behind the symptoms. She was subsequently discharged, after which no clinical intervention was required, including medication.
