Abstract

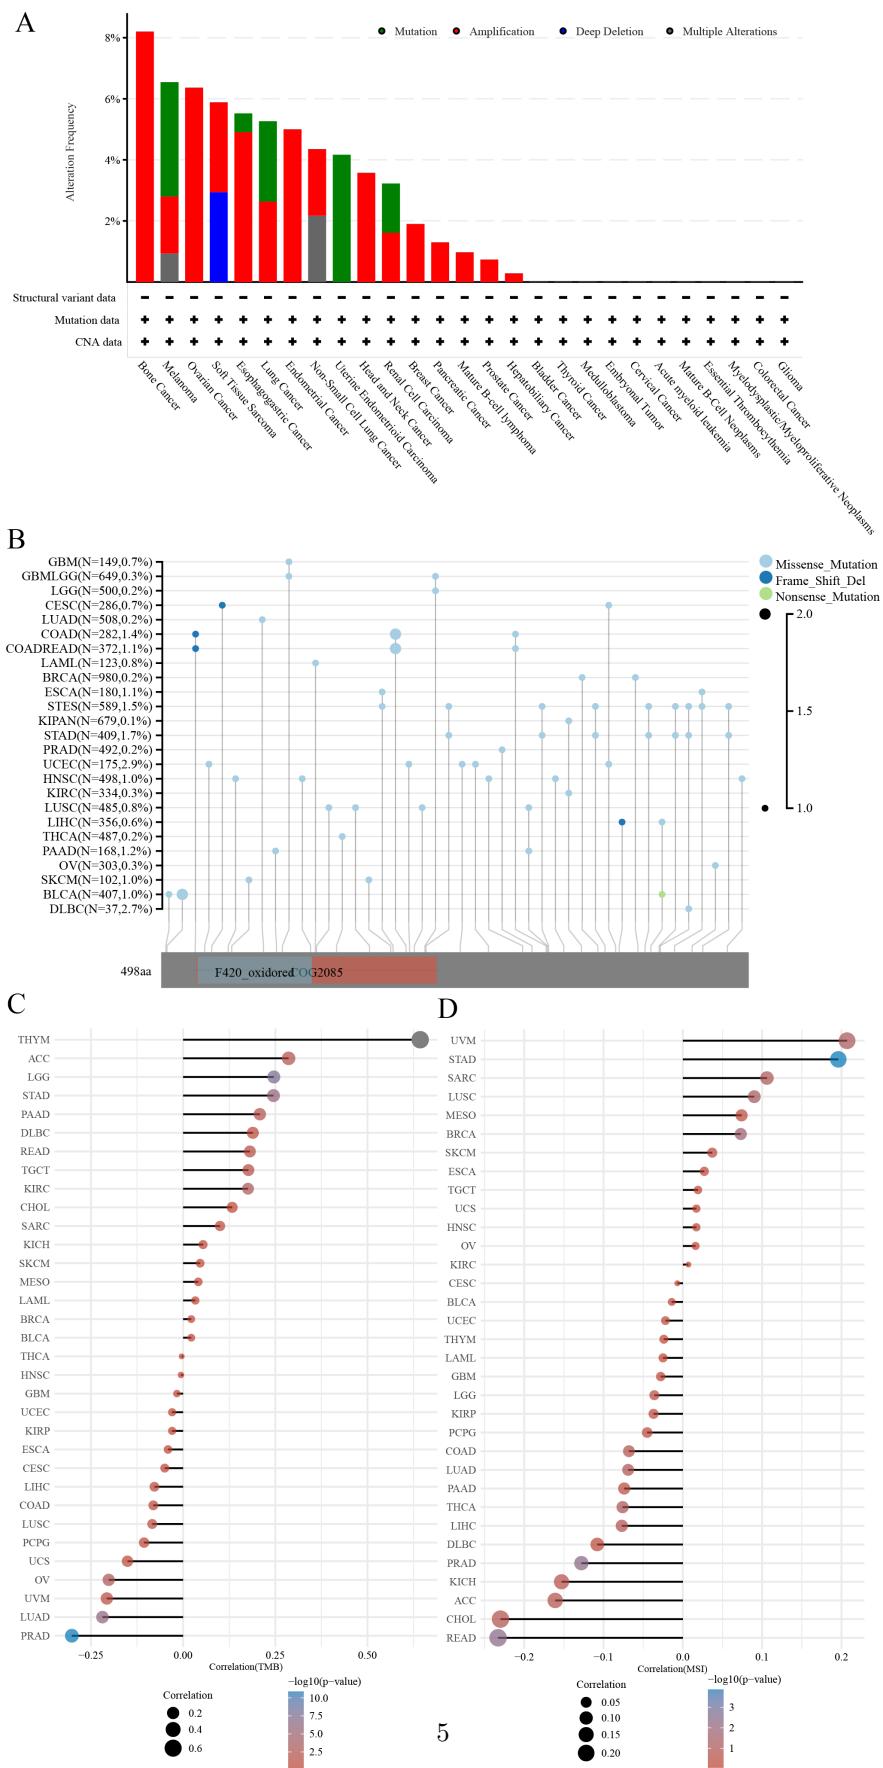

Background: The six-transmembrane epithelial antigen of the prostate 3 (STEAP3) plays an essential role in iron uptake as an iron reductase. Previous studies found that STEAP3 may play crucial roles in tumorigenesis. However, a comprehensive pan-cancer analysis of the prognosis and immunity of STEAP3 has not yet been reported. **Methods:** We performed a systematic analysis of the prognosis and immunity of STEAP3 in human pan-cancer. The data analysis and visualization were completed with R and Cytoscape. STEAP3 expression in cell lines and tissues was measured in multiple ways. Functional validation experiments were performed by shRNA knockdown in A498 and 786-O cell lines. Cell proliferation and invasive ability was detected by CCK-8 assay, transwell assay and wound healing assay. **Results:** In most tumor tissues, STEAP3 expression was remarkably upregulated and correlated with prognosis, particularly in clear cell renal cell carcinoma (ccRCC). Furthermore, STEAP3 expression was closely correlated with immune infiltrates and may induce recruitment and polarization of M2 macrophages in ccRCC. STEAP3 may be valuable for predicting responses to immune-checkpoint blockade (ICB) therapy. In addition, enrichment analysis results indicated that STEAP3 was positively related to immune-related pathways, P53 pathways and epithelial-mesenchymal transition (EMT). Finally, we demonstrated that STEAP3 was highly expressed in ccRCC tissues and might stimulate EMT via the downregulation of CDH1 in vitro in ccRCC. **Conclusion:** STEAP3 might function as a prognostic biomarker and immunotherapy response predictor in various cancers. Especially in ccRCC, STEAP3 is a new prognostic biomarker and exerts tumor-promoting function via stimulating the invasion and EMT and inducing recruitment and polarization of M2 macrophages.

Table1 Abbreviations of cancers in the TCGA-Pancancer cohort

Abbr	unabbreviated form
ACC	Adrenocortical carcinoma
AML	Acute Myeloid Leukemia
BLCA	Bladder Urothelial Carcinoma
BRCA	Breast invasive carcinoma
CESC	Cervical squamous cell carcinoma and endocervical adenocarcinoma
CHOL	Cholangiocarcinoma
COAD	Colon adenocarcinoma
DLBC	Lymphoid Neoplasm Diffuse Large B-cell Lymphoma
ESCA	Esophageal carcinoma
GBM	Glioblastoma multiforme
HNSC	Head and Neck squamous cell carcinoma
KICH	Kidney Chromophobe
KIRC	Kidney renal clear cell carcinoma
KIRP	Kidney renal papillary cell carcinoma
LAML	Acute Myeloid Leukemia
LGG	Brain Lower Grade Glioma
LIHC	Liver hepatocellular carcinoma
LUAD	Lung adenocarcinoma
LUSC	Lung squamous cell carcinoma
MESO	Mesothelioma
OV	Ovarian serous cystadenocarcinoma
PAAD	Pancreatic adenocarcinoma
PPGL	Pheochromocytoma and Paraganglioma
PRAD	Prostate adenocarcinoma
READ	Rectum adenocarcinoma
SARC	Sarcoma
SKCM	Skin Cutaneous Melanoma
STAD	Stomach adenocarcinoma
TGCT	Testicular Germ Cell Tumors
THCA	Thyroid carcinoma
THYM	Thymoma
UCEC	Uterine Corpus Endometrial Carcinoma
UCS	Uterine Carcinosarcoma
UVM	Uveal +A3:B36Melanoma

Table2. Clinical information of all patients

Patients	Sex	Age	Grade	TStage
