Abstract

no software development exists in industries without the proper relevant software requirements. All the cycles of design and development are based on it. We can say that its play as the backbone for the whole development process. In this paper, process analysis of requirement management in the software industry in the light of real industrial survey through a proper questionnaire. All the results analysis based on a given filled survey by a specific company employee. Their results are based on the requirement life cycle (Trace, Maintain, Prioritize, Access, Approve) that is explained in the result section.
