Introduction

This is intro to the topic. Let's see how it looks like.

Main section

Here we will discuss the details of our study. But why doesn't it make the "Main section" into a section automatically when I add the # sign? Should I write in LaTeX instead?

\section{Another section}

Apparently not.

There's a lot of stuff to discuss...

Can I write math? $x=y^2$

But how do I connect this to a bib file?
