

Table 6. Analysis of risk factors of CLABSI in pediatric patients with neuroblastoma

	Patients without CLABSI (n=49)	Patients with CLABSI (n=8)	P value
Age at the time of insertion (mean±SD)	1.0±0.6 y	1.6±1.0 y	0.017
Male sex	28.6%	50.0%	0.209
TIVAP indwelling time (mean±SD)	206±125.6 d	151.8±75.7	0.250
BMI at the time of insertion (mean±SD)	16.8±1.4	15.7±1.4	0.048
WHO child growth standards			0.045
<50th percentile	16	6	
>50th percentile	33	2	
COG			0.017
High risk	9	5	
Low and intermediate risk	40	3	

CLABSI=central line-associated bloodstream infection; SD=standard deviation; TIVAP=totally implantable venous access port; BMI=body mass index; WHO=World Health Organization
