

Table 5. Analysis of risk factors of CLABSI in pediatric patients with solid tumors

	Patients without CLABSI (n=133)	Patients with CLABSI (n=11)	P value
Age at the time of insertions (mean±SD)	1.1±0.7 y	1.4±0.9 y	0.193
Male sex	34.9%	54.5%	0.231
TIVAP indwelling time (mean±SD)	211.0±104.2	143.5±65.7 d	0.250
BMI at the time of insertion (mean±SD)	16.7±2.0	16.2±1.7	0.459
Time of operation (mean±SD)	74.2±80.3 min	66.4±87.3 min	0.758
Diagnosis			0.026
Neuroblastoma	49	8	
Non-neuroblastoma	84	3	

CLABSI=central line-associated bloodstream infection; SD=standard deviation; TIVAP=totally implantable venous access port; BMI=body mass index
