

Pharmacokinetic parameters	Normal ranges
Absorption	Rapid and complete
Bioavailability	100%
Protein binding	rasburicase is a protein itself, protein-binding studies were not carried out
Volume of distribution	60 – 100 ml/kg in healthy volunteers, 110 to 127 mL/kg in paediatric patients and from 75.8 to 138 mL/kg in adult patients, respectively
Metabolism	peptide hydrolysis
Excretion	Rasburicase was not stable in urine
Elimination half-life	ranged from 15.7 to 22.5 hours

Table 1: Pharmacokinetic parameters of Rasburicase
